BEST AVAILABLE COPY

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 29 and 39 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Neither the specification nor the drawings as originally filed provide an adequate description of the spring-loaded foot to enable a proper search of same.

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 31-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The limitation of "using the cable as a safety cable between steps a and b" is unclear.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Price.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21,22,23,26-28,30-33,36-38,40 - 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palmer '50 in view of Bruske, Murray, or Garcia. Palmer shows the claimed apparatus with the exception of the cables and. Bruske, Murray, and Garcia all show cables and clamping devices. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Palmer with cables and clamping devices as a safety line for workers.

Claims 24 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palmer and either Burske, Murray, or Garcia, as applied to claim 21 above, and further in view of Pollman. Pollman shows internal (7) and external (spiral corrugation) strengthening components. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Palmer with internal and external strengthening components for reinforcing his vertical supports.

Claims 25 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palmer and either Burske, Murray, or Garcia, as applied to claim 21 above, and further in view of Aaldenberg and Keeton or Ammons. Aaldenberg shows an internal (94) strengthening component. Keeton in fig.5 shows an external (107) strengthening component. Ammons at 39,38 shows an external strengthening component. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Palmer with internal and external strengthening components for reinforcing their vertical supports.
